AUTHOR: Solovov, A. P.

TITLE: A Metallometric Survey (Poiskovaya metallometriceskaya  
s"yemka)

PERIODICAL: Sov. geologiya, Nr 49, 1955, pp 119-138.

ABSTRACT: The author describes the geologic basis for a metallometric survey: mechanical aureoles of dissemination--salt, gas, syngenetic, epigenetic, exposed, covered. He discusses the methods and techniques for conducting the survey and indicates the sensitivity of spectral analyses for different elements and the relative precision of the determinations. He also describes a sampling network, showing traverses for the survey, and giving details in illustrative examples. The physico-mathematical foundation for the distribution of metals in disseminated aureoles is described in detail and a graph is supplied to show the distribution in steeply

Compounds

11 Oct 52

"The Preparation of Organosilicon Compounds From Unsaturated Hydrocarbons," Acad A. V.  
Topchiev, N. S. Nametkin, and O. P. Solovova

"Dok Ak Nauk SSSR" Vol 86, No 5, pp 965-968

Refer to literature of recent years which indicates that aromatic hydrocarbons, in their reaction with trichlorosilane or its homologs (in the presence or the absence of the catalysts,  $\text{BF}_3$  or  $\text{BCl}_3$ ), yield aromatic halogenosilanes. Add that they synthesized certain hydrogen-containing halogenosilanes and disilanes by the direct reaction of alkyl bromides, methylene chloride, and dichloroethane with silicon. State that they became interested in preparing new organosilicon compounds by the direct reaction of compounds of silicon to unsaturated hydrocarbons. Since tribromosilane is obtained as a secondary product of the direct synthesis of alkylbromosilanes (in insignificant amounts), could also prepare it directly from hydrogen bromide and silicon. The yield of hydrogen product obtained is silicon tetrabromide. Authors state that the rate of flow of HBr has a decisive effect on obtaining good yields of tribromosilane. A weak current of HBr leads mostly to a formation of silicon tetrabromide, whereas an increase in the rate of flow of HBr to increased yields of hydrogen compounds. The authors also found that hydrogen-containing disilanes, analogously to hydrogen containing silanes, when added to unsaturated hydrocarbons, from the corresponding alkyl-halogeno-disilanes.

7. Addition of hydrogen-containing halogen derivatives of disilanes to unsaturated hydrocarbons. N. S. Namekina, A. V. Topchiev, and O. P. Solovova. Doklady Akad. Nauk SSSR, 285-2 (1985). From the reaction products of  $\text{CH}_2\text{Cl}_2$  with Si were isolated  $\text{C}_6\text{H}_5\text{SiH}_3$  (I), b.p. 163-3.2°, and  $\text{C}_6\text{H}_5\text{Si}_2\text{H}_2$  (II), b.p. 151.2-3.5° (cf. U.S. 2,381,000, C.A. 39, 4889). These were isolated from the 40% fraction of products b. 70-170°, when the reaction was run at 350° in this fraction. The use of a stream of dry HCl gave a 52% yield of this fraction. I (100 g.), 51 g. 1-heptene, and

9.7 g.  $\text{Bu}_3\text{O}$ , heated 15 hrs. at 75-95°, gave 75 g.  $\text{C}_6\text{H}_5\text{Cl}_2\text{SiH}_3$  (III), b.p. 124-1.5°, b.p. 265°, and a small amt. of crude dihexylchlorosilane, b.p. 178.5-8.0°. III (45 g.) and 60 g. iso-BuOH (cf. C.A. 47, 6353a) gave 64% heptyl-periodotrichlorodisilane, 64%, b.p. 201.7-202°, d<sub>4</sub> 0.8976, n<sub>D</sub> 1.4313. I with 1-heptene in the presence of  $\text{Bu}_3\text{O}$  after 7 hrs. at 120° gave a combined yield of 64.7% heptyl-periodotrichlorodisilane, b.p. 130.3-7.0°, b.p. 280.5°, and diheptylchlorotrichlorodisilane, b.p. 153-8°. Heating 83.3 g. tetrachlorotetramethane and 46 g. 1-heptene with 6 g.  $\text{Bu}_3\text{O}$  18 hrs. in a steam bath gave 43.4 g. crude products, which yielded 22.5 g. Hexylchlorotrichlorodisilane, b.p. 113.5-14.0°, and 7.8 g. crude dihexylchlorotrichlorodisilane, b.p. 169-71°. The results show that the addition of a 2nd mole of an olefin proceeds with much more difficulty than in the case of the 1st mole (Sommer, et al., C.A. 41, 1938A). O. M. Kosolapoff

TITLE: Preparative method for fluoroaromatic cyclophosphonitriles. Class 12.  
No. 177886

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 2, 1966, 27  
TOPIC TAGS: phosphorus compound, nitrogen compound, fluorine compound, fluorinated organic compound

ABSTRACT: An Author Certificate has been issued for a preparative method for fluoroaromatic cyclophosphonitriles. The method involves the reaction of sodium or potassium fluorophenolate with phosphonitrile chloride on heating in an inert solvent, such as tetrahydrofuran. [SM]

TITLE: Copying Device for Automatic Welding of Overlap Joints by Inclined Electrode

PERIODICAL: Avtomicheskaya svarka, 1960, No. 6, pp. 60-62

TEXT: The usual copying devices on standard welding overlap joints with a top sheet of 10 mm thickness as the copying roller frequently loses contact with the vertical metal edge when it slightly deviates to the side. A new device developed at the welding laboratory of TsNIITMASH, which is actually a simple accurate copying "tractor" TC-17my (TS-17mu) (Fig. 1), ensures more copied edge. The new device is shown in Figure 2. Its mobile part consists of a block (1) with inserted free rotating axle bearing the nozzle (6). The guide (4) and a clamp (7) holding the nozzle (6). The guide (4) and

Card 1/5

Copying Device for Automatic Welding of Overlap Joints by Inclined Electrode

the clamp (7) are so connected with a lever (11) that the position of the clamp and hence the incline angle of the nozzle can be regulated using the handle. The block (1) is connected to the electrode guide (4) by a screw (2) with the nut (6). The distance between the electrode end and the copying roller in a plane at right angles to the welding line can be smoothly adjusted in a well as later for compensating the wear of the nozzle. The "tractor" need not to be stopped to displace the electrode. The "tractor" need not to be stopped to the vertical joint edge by a spring (9). The spring pressure is adjusted by a nut (10). Current is supplied to the nozzle by flexible buses. The device has been tested and proved suitable for welding straight and curved overlaps as well as T-joints. There are 2 figures.

TITLE

Achievements of Chelyabinsk NIITEKhMASH in the field of mechanized  
welding practice

PERIODICAL

Svarochnoye proizvodstvo, no. 10, 1961, 20

TEXT:

Together with the Plant imeni S. Ordzhonikidze, the Scientific  
(NIITEKhMASH) has investigated and accomplished the method of pulsation-arc  
(vibration arc) building-up and welding with the use of pulsation-arc  
technology in a cooling liquid jet, under flux, and in carbon dioxide. As a  
result of the study it was found that: 1) hot rolled and cold rolled low carbon  
steels, 0.6 - 2.0 mm thick, can be welded by the pulsation arc process without  
supply of liquid using (Sv-08) wire up to 2.0 mm in diameter; 2) Pulsation arc  
welding of thin low carbon steel produces slight deformations of the welded part,  
a reduced area of heat-affected zone and seams with a 0.6 - 2 mm leg.

Achievements of Chelyabinsk NIITEKhMASH ...

relatively high welding speed. The pulsation arc welding machine is simple in operation. 3) The vibration of the welding wire tip at 100 cycles frequency and at a constant feed rate, assures satisfactory excitation of the arc and its stable burning; the metal is transferred by small portions 4) Satisfactory formation of the weld joint is obtained at 80 - 100 cm/n welding speed for 0.6 - 2.0 mm thick metal. 5) The low voltage AHA-1600/750 (and 1000/1000) generator is recommended as a power supply source. An additional load resistor in the form of a throttle with sectional winding is used to reduce the resistance in the welding circuit. There is 1 figure.

Moscow. Dom nauchno-tekhnicheskoy propagandy imeni P.E. Dzerzhinskogo. Novye i tekhnologicheskiye metody i sredstva v proizvodstve i na strelkovykh zavodakh. Izdatel'stvo konferentsii (new features in the methods or high-productivity sheet metal stamping). Collection of Conference Transactions. Moscow, 1959. 228 p. 8,000 copies printed.

Sponsoring Agency: Ganchikov po raspredeleniyu politicheskikh i tekhnicheskikh nauchnykh svedenii RTRFL.

Author: Ed. I. V.T. Moshchikov, Doctor of Technical Sciences, Professor; Ed. I. V.D. Golovkin, Candidate of Technical Sciences, Docent; and Ye. Ye. Langeray, Candidate of Technical Sciences, Docent. Ed. 2a. of Publishing House "D. M. Skorokhodov", Tech. Ed. B.I. Model'; Tech. Ed. S. N. Kharlamov, Ed. for Literature on Heavy Machine Building (Machine); S. Ya. Golovkin, Enginner.

PURPOSE: This collection of papers is intended for engineers and technicians in sheet metal stamping. It may also be useful to students of rules and techniques.

COVERAGE: This collection deals with the design and features of some current problems in sheet metal stamping. Also discussed are productive methods still in the experimental stage. Several articles deal with new mechanisms and automation of stamping processes and describe recently developed methods, such as explosion forming, the use of automatic rotary transfer lines, and press blocking with the use of radioactive isotopes. No personalities are mentioned. References follow several of the articles.

Contributor: M.N. [Candidate of Technical Sciences, Docent, Avtomaticheskaya Tekhnologicheskaya Institut, Novaya (new) Aviation Technology Institute]. Significance of Local Heating of Blanks in Increasing the Productivity of Sheet Metal Stamping. 85

Distribution of stresses and temperatures during local heating in the deformed zone of tubular workpieces is analyzed. Formulas are presented.

Contributor: I.P. Semashko, Zayod Iosif Semashko, Novaya Avtomaticheskaya Tekhnologicheskaya Institut, Novaya (new) Aviation Technology Institute]. Significance of Local Heating of Blanks in Increasing the Productivity of Sheet Metal Stamping.

Advantages of using tubular blanks in making thin-walled shell-type parts by reducing and building operations are discussed. Local preheating for building is accomplished by heating the punch. Special features and the effectiveness of this method are also discussed.

Contributor: P.P. [Candidate of Technical Sciences, Docent, Politekhnicheskii Institut im. Goričkogo (Goričkii Polytechnicheskii Institut). Special Features of Blanking With an Increased Number of Strips. 145

The author describes research done on this process in the cold-drawing department of the "Central Plant" and the laboratory of the Department of Machinery and Metal Processing, GIP. M. A. Zhukov, A.A. Sapozhnikov, department head, and K.S. Orlitskii, process engineer, took part in the investigations made at the truck plant, and K.V. Samoylov, Candidate of Technical Sciences, participated in the work done at GIP. The article describes changes in punch and die dimensions and clearances in relation to changes in the number of strips per minute and the number of parts cut out. Optimal clearances, minimum resistance, punching force and energy consumption at various working speeds are discussed.

Author: A.E. [Enginner, Moscow Machine Tool and Instruments Institute]. Press Blanking With the Use of Inductive Heating. 148

The article presents information on the use of induction to stop presses in processes where two or more blanks are being fed, and on the principle of operation and the description of a beta-ray electronic relay. Suggestions for placing the emitter and receiver are given, and safety measures are discussed.

AUTHOR: Solovtsova, K. M.

TITLE: The effects of hf and mf electromagnetic fields on the liver function of people with normal and moderately disrupted liver function

SOURCE: Fiziologichnyy zhurnal, v. 11, no. 4, 1965, 498-503

TOPIC TAGS: microwave, electromagnetic field, biological effect, liver function, inductotherapy

ABSTRACT: The effects of medium- (13.56 mc) and high-frequency (40.18 mc) fields on the antitoxic function and carbohydrate and nitrogen metabolism of the liver were studied. Irradiation was applied locally to the liver area. These indices were studied in people with normally functioning livers and those with moderately disrupted liver function. A DKV-2 (13.56 mc) inductothermal generator and a "Khiran" UVCh (40.18 mc) generator were used. The antitoxic function of the liver was assessed by the Quick-Pytel' [second name transliterated] method with a 4.0-g sodium benzoate load followed by a weight determination of hippuric acid excreted for 4 hr thereafter. The deaminating and urea-producing function of the liver was determined by studying the rate of aminogroup nitrogen and urea excretion for 5 hr after a glycocoll load

Card 1/3

L 3625-66

ACCESSION NR: AP5024161

(25.0 g). The carbohydrate metabolism was studied by means of a galactose load (40 g). The concentration of blood sugar on an empty stomach, the hyperglycemic curve for 2 hr after the load, indices of the hyperglycemic and posthyperglycemic coefficient, and the magnitude and duration of galactosuria were studied. The data showed that a single dose of mf inductothermy and hf altered the functional condition of the liver especially in those people with slightly disrupted liver function. These shifts were characterized by an increase in hippuric acid excretion after a sodium benzoate load. After the glycocoll load, aminogroup nitrogen excretion decreased, and urea output increased. The level of blood sugar on an empty stomach did not change significantly when the liver area was irradiated by mf. People with normally functioning livers showed little change even in the character of the glycemic curve after exposure to mf and hf. Thus, the data indicates that single doses of both mf and hf have the same effect in elevating the functional capacity of a moderately disrupted liver. The results of this study should be taken into consideration when using these frequencies for therapeutic purposes. Orig. art. has: 2 tables and 2 figures.
